## **Getting Google Cloud Platform Credits**

Google has provided all students in this class with \$50 of credit to use for BigQuery. This should be enough to finish the course, possibly even with credit remaining.

Credit policies & information:

- 1. \$50 of credit is enough to query **10 Terabytes** of data (\$5/TB). This is a very large amount of data for the purposes of this class. You would need to run 1000 queries on 10GB in order to exhaust this, for example.
- 2. Google provides all users of BigQuery an additional **1TB free / month**. You may find that you don't even use 1TB over the course of the first two projects.
- 3. You are responsible for your credit. If you are in danger of running out (eg, you are running \$2 queries) please contact the TAs. We are able to help students before they use up their credits, but there's not much we can do after you've used them up.
- 4. Google charges by **# of rows \* # of columns \* size of column** for each query. The easiest and best way to keep the amount of data you handle down is to use **only the columns you need for your query**. It can be a little verbose at times, but if you stick to the practice of writing **SELECT column1, column2** ..., you will save lots of credits over the course of the quarter.

**Note**: AVOID USING **SELECT** \*. Google will charge the query as scanning the whole table, even if it doesn't.

In order to get your BigQuery credits, you will need to:

1. Go to this link. You'll see the following page:
